

Abstract

For simplified supply of potentiometric sensors 1 with reference
5 electrolyte 12, the invention provides a sensor plug head 17 for
connecting to the cable connection piece 13 of a potentiometric sensor 1,
with the sensor plug head 17 including, besides the usual electric
connections 18, 19, a supply connection for connecting to a reference
container of the potentiometric sensor 1. The supply connection
10 includes, preferably, an electrolyte line 20 and the reference container
an opening 16, with the electrolyte line being connectable to the opening,
in order to supply the reference container with electrolyte.
